Supplementary Figure 1. Characterization of ADA3 monoclonal antibody specificity for IHC staining. (A) IHC staining of vector and flag-tagged ADA3 overexpressing immortalized normal mammary epithelial cells (76N-TERT), using ADA3 mAb and mouse IgG (control). (B) Western blotting of 76N-TERT cells transfected with vector or hADA3. (C) IHC staining of ADA3^{fl/fl} and knock out MEFs. (D) Western blotting of ADA3^{fl/fl} and ADA3^{-/-} MEFs.
