Figure S4. Bacterial burdens of 7-week old C57BL/6 mice subcutaneously infected with $1 \times 10^6$ CFU of *Staphylococcus aureus* Δ*hla*, Δ*hla* Δ*opp3*, or Δ*hla* Δ*aure* 5 days post infection. No statistical significance between the strains as determined by Kruskal-Wallis Test, n=10. Data are representative of 2 independent studies.
