# Instructions for authors

Thank you for choosing to submit your paper to us. These instructions will ensure we have everything required so your paper can move through peer review, production and publication smoothly. Please take the time to read and follow them as closely as possible, as doing so will ensure your paper matches the journal's requirements. For general guidance on the publication process at Taylor & Francis please visit our [Author Services website](#).

**AUTHORSERVICES**  
Supporting Taylor & Francis authors

 **Editorial Manager®**

This journal uses Editorial Manager to peer review manuscript submissions. Please read the [guide for Editorial Manager authors](#) before making a submission. Complete guidelines for preparing and submitting your manuscript to this journal are provided below.

## About the Journal

*RNA Biology* is an international, peer-reviewed journal publishing high-quality, original research. Please see the journal's [Aims & Scope](#) for information about its focus and peer-review policy.

Please note that this journal only publishes manuscripts in English.

*RNA Biology* accepts the following types of article:

- Research Papers/Reports
- Brief Communications

-  Technical Paper
-      Commentaries and Views
-  Meeting Reports
- Letters to the Editor
- Reviews
- Point-of-View
- Commentaries

### **Publication Charges**

There are no submission fees for this journal, but the charges detailed below may be applicable upon acceptance. You can choose to publish your article open access at our Open Select rate of \$2,950. If you choose to publish open access, no additional page or color charges will apply.

For all other articles, a page charge of \$125 per page applies to the published typeset pages.

Taylor and Francis operates a waiver policy for low- and lower-middle-income economies which applies to page charges. Corresponding authors with primary affiliations based in countries defined by the World Bank as '[Low-Income Economies](#)' are entitled to apply for a 100% page charge waiver and corresponding authors with primary affiliations based in countries defined by the World Bank as '[Lower-Middle-Income Economies](#)' are entitled to apply for a 50% discount on the normal page charge.

If you think you may be eligible for a page charge discount or waiver, please check that your country is one of those defined by the World Bank as being low-income or lower-middle-income. Submit through the journal's online submission system in the usual way, following the Instructions for Authors. During the process of submitting your manuscript online you will be asked whether you wish to request a discount or waiver. Please select the appropriate option at this stage. Please note that discount and waiver requests must be made when you first submit your

manuscript. It will not normally be possible to process requests made on any subsequent revisions.

Color figures will be reproduced in color in your online article free of charge. If it is necessary for the figures to be reproduced in color in the print version, a charge will apply. Charges for color figures in print are \$225 per figure for the first four figures and figures five and above will be charged at \$80 per figure. Depending on your location, these charges may be subject to local taxes. There is no fee for hosting online supplemental material.

Colour figures will be reproduced in colour in your online article free of charge.

## Peer Review

Taylor & Francis is committed to peer-review integrity and upholding the highest standards of review. Once your paper has been assessed for suitability by the editor, it will then be single blind peer reviewed by independent, anonymous expert referees. Find out more about [what to expect during peer review](#) and read our guidance on [publishing ethics](#).

## Preparing Your Paper

All authors submitting to medicine, biomedicine, health sciences, allied and public health journals should conform to the [Uniform Requirements for Manuscripts Submitted to Biomedical Journals](#), prepared by the International Committee of Medical Journal Editors (ICMJE).

## Research Papers/Reports

- Should be written with the following elements in the following order: title page; abstract; keywords, main text introduction, results, discussion; patients and methods/materials and methods, acknowledgments; declaration of interest

statement; references; appendices (as appropriate); table(s) with caption(s) (on individual pages); figures; figure captions (as a list)

- Should contain an unstructured abstract of 250 words.
- Between 5 and 10 **keywords**. Read [making your article more discoverable](#), including information on choosing a title and search engine optimization. Patients and Methods/Materials and Methods: Describe the selection of patients or experimental animals, including controls. Do not use patients' names or hospital numbers. Identify methods, apparatus (manufacturer's name and address) and procedures in sufficient detail to allow other workers to reproduce the results. Provide references and brief descriptions of methods that have been published. When using new methods, evaluate their advantages and limitations. Identify drugs and chemicals, including generic name, dosage and route(s) of administration.

### **Brief Communications**

- Should be written with the following elements in the following order: title page; abstract; keywords; results, discussion; patients and methods/materials and methods, acknowledgments; declaration of interest statement; references; appendices (as appropriate); table(s) with caption(s) (on individual pages); figures; figure captions (as a list)
- Should contain an unstructured abstract of 120 words.
- Between 5 and 10 **keywords**. Read [making your article more discoverable](#), including information on choosing a title and search engine optimization. Brief Communications are aimed at publishing short, but important, breakthrough data not embedded within a complex story. The paper should be structured as a research paper (see above), but without the headings and subheadings. No more than 50 references and no more than 4,500 words altogether.

### **Technical Paper**

- Should be written with the following elements in the following order: title page; abstract; keywords; main text introduction, results, discussion; patients and methods/materials and methods, acknowledgments; declaration of interest

statement; references; appendices (as appropriate); table(s) with caption(s) (on individual pages); figures; figure captions (as a list)

- Should contain an unstructured abstract of 250 words.
- Between 5 and 10 **keywords**. Read [making your article more discoverable](#), including information on choosing a title and search engine optimization.

Technical Papers contain original research, however, they differ from Research Papers in that they describe new approaches, methods, or reagents rather than new understanding of a natural molecule or biological process. Papers may be submitted as either Technical or Research Papers, but the assignment to either category is the discretion of the Editors. All submissions will be peer reviewed.

### Commentaries and Views

- Should be written with the following elements in the following order: title page; abstract; keywords; main text introduction, results, discussion; patients and methods/materials and methods, acknowledgments; declaration of interest statement; references; appendices (as appropriate); table(s) with caption(s) (on individual pages); figures; figure captions (as a list)
- Should contain an unstructured abstract of 200 words.
- Between 5 and 10 **keywords**. Read [making your article more discoverable](#), including information on choosing a title and search engine optimization.

Commentaries and Views may be short and focused opinion articles, commentaries on papers recently published in RNA Biology or elsewhere, or commentaries on significant conceptual changes, important trends or new directions in the field. These may include figures and up to 30 references.

### Meeting Reports

- Should be written with the following elements in the following order: title page; abstract; keywords; main text
- Should contain an unstructured abstract of 200 words.
- Between 5 and 10 **keywords**. Read [making your article more discoverable](#), including information on choosing a title and search engine optimization. Meeting Reports are summaries of presentations from recent meetings in the field. Authors are encouraged to contact the Editor-in-Chief with proposals for meeting

reports. Also, please contact the meeting organizers to verify that reports will be permitted.

## Letters to the Editor

- Should be written with the following elements in the following order: title page; abstract; keywords; main text introduction, materials and methods, results, discussion; acknowledgments; declaration of interest statement; references; appendices (as appropriate); table(s) with caption(s) (on individual pages); figures; figure captions (as a list)
- Should contain an unstructured abstract of 120 words.
- Between 5 and 10 **keywords**. Read [making your article more discoverable](#), including information on choosing a title and search engine optimization. Letters to the Editor are aimed at publishing short, but important, breakthrough data not embedded within a complex story. This can also be what is considered a Small Publishable Unit. In other words, data that is sufficient in itself to be published, but not a part of a larger story that would comprise an entire research article. Letters to the Editor can also be mini-reviews with a small addition of novel data. The abstract should not be longer than 120 words. The paper should be structured as a research paper (see above), but without the headings and subheadings. No more than 50 references and no more than 4,500 words altogether.

## Reviews

- Should be written with the following elements in the following order: title page; abstract; keywords; main text introduction, materials and methods, results, discussion; acknowledgments; declaration of interest statement; references; appendices (as appropriate); table(s) with caption(s) (on individual pages); figures; figure captions (as a list)
- Should contain an unstructured abstract of 150 words.
- Between 5 and 10 **keywords**. Read [making your article more discoverable](#), including information on choosing a title and search engine optimization. Reviews should be recognized as scholarly by specialists in the field being covered, but should also be written with a view to informing readers who are not specialized in

that particular field, and should therefore be presented using simple prose.

Please avoid excessive jargon and technical detail. Reviews should capture the broad developments and implications of recent work. The opening paragraph should make clear the general thrust of the review and provide a clear sense of why the review is now particularly appropriate. The concluding paragraph should provide the reader with an idea of how the field may develop or future problems to overcome, but should not summarize the article. To ensure that a review is likely to be accessible to as many readers as possible, it may be useful to ask a colleague from another discipline to read the review before submitting it. Submitted reviews are subject to the same page charges as full-length reports—whether and how page charges will apply for commissioned reviews will be determined upon each commission. Reviews should cite no more than 150 references.

### **Point-of-View**

- Should be written with the following elements in the following order: title page; abstract; keywords; main text introduction, materials and methods, results, discussion; acknowledgments; declaration of interest statement; references; appendices (as appropriate); table(s) with caption(s) (on individual pages); figures; figure captions (as a list)
- Should contain an unstructured abstract of 150 words.
- Between 5 and 10 **keywords**. Read [making your article more discoverable](#), including information on choosing a title and search engine optimization. Point-of-View articles should follow the same general guidelines as reviews, however there is considerable flexibility in the length and content. These articles are intended to address controversial issues, express new ideas, or expand on work already published. They may contain new data, and like other submissions, are subject to peer review. Like review articles, they should be accessible to a wide readership. Point-of-View articles are generally commissioned from authors of the most important recent papers to offer additional insights. Unsolicited Point-of-View articles are also welcome, and these may discuss the authors' own work or recent significant work in their field. These should be structured like reviews and be 1,500 to 2,500 words. Responses to Point-of-View articles are encouraged and will

also be published as Point-of-View articles. Responses may be considerably shorter and structured as letters.

## Commentaries

- Should be written with the following elements in the following order: title page; abstract; keywords; main text introduction, materials and methods, results, discussion; acknowledgments; declaration of interest statement; references; appendices (as appropriate); table(s) with caption(s) (on individual pages); figures; figure captions (as a list)
- Should contain an unstructured abstract of 200 words.
- Between 5 and 10 **keywords**. Read [making your article more discoverable](#), including information on choosing a title and search engine optimization. For Commentaries, the Editorial Board will solicit authors of the most significant recent and forthcoming papers, published elsewhere, to provide a short summary with additional insights, new interpretations or speculation on the relevant topic. These manuscripts may include data or models that due to space limitations were not included or discussed in the original paper. In other words, the authors may provide biased and uncensored points of views, complementing their article. Typically a Commentary contribution consists of approximately 1000-3000 words. No more than 50 references, please.

## Style Guidelines

Please refer to these [quick style guidelines](#) when preparing your paper, rather than any published articles or a sample copy.

Please use American spelling style consistently throughout your manuscript.

Please use double quotation marks, except where “a quotation is ‘within’ a quotation”. Please note that long quotations should be indented without quotation marks.

## Formatting and Templates

Papers may be submitted in Word format. Figures should be saved separately from the text. To assist you in preparing your paper, we provide formatting template(s).

[Word templates](#) are available for this journal. Please save the template to your hard drive, ready for use.

If you are not able to use the template via the links (or if you have any other template queries) please contact us [here](#).

Guidelines for the RNA Families Track. This track will primarily publish articles describing either: (1) substantial updates and reviews of existing RNA families or (2) novel RNA families based on computational and/or experimental results for which little evolutionary analysis has been published. These articles must be accompanied by STOCKHOLM formatted alignments, including a consensus secondary structure or structures and a corresponding Wikipedia article. Publication in the track will require a short manuscript, a high quality Stockholm alignment and at least one Wikipedia article; each centered around the RNA in question. The article itself should adhere to the format: Abstract, Introduction, Results, Discussion, Materials and Methods and Supplementary Material. The Introduction should give an overview of the family detailing how and when the original members were identified, what is the function (if known) of the family and what was previously known about the taxonomic distribution of the family. The Results section should discuss the new homologues (distinguishing paralogues and orthologues) found in the study, as well as the taxonomic distribution and evolutionary conservation of the families sequence and structure. Suggested figures are secondary structure diagrams, alignments (of the smaller families), phylogenetic trees and sequence logos. The Conclusions/Discussion section should not repeat in detail data given in the Results section. Emphasize the new and important aspects of the study. Relate observations to other relevant studies. On the basis of your findings (and others'), discuss possible implications/conclusions. The Materials and Methods section should detail: the sources of seed sequences and structures; the methods and tools used for

homology searches, alignments and secondary structure predictions; the sequence databases searched. Correct version numbers and references should be given where relevant. To be eligible for publication the Supplementary Material must contain: 1. a link to a Wikipedia article preferably in a User's space. Upon acceptance, this can easily be moved into Wikipedia itself together with a reference to the published article. 2. a plain text Stockholm formatted file containing an alignment and consensus secondary structure for the family. Formatting your Stockholm alignment The quality and consistency of the submitted alignment will be of primary importance for publication in the RNA families track. The minimal requirements for a Stockholm alignment are: 1. A header line eg. '# STOCKHOLM 1.0'. 2. At least two sequences, each preceded with a unique plain-text sequence ID. 3. A secondary structure line, preceded with the tag '#=GC SS\_cons ', followed by a secondary structure string. Consensus basepairs are represented by matching parentheses, any of '({[]}]' type parentheses are acceptable. Unpaired sites can be indicated by any of the characters '.,;'. Pseudoknots should be marked-up by matching upper and lower case english alphabet characters. The 5' nucleotide within the knot should be in uppercase and the 3' nucleotide lowercase. 4. A footer line indicating the end of alignment eg. '// '. Ideally the alignment will be marked up with information distinguishing between experimentally validated seed sequences and computationally determined homologs. The sources and relevant identifiers of each sequence can also be documented. These additional pieces of information can be added using '#=GS 'tags. See the Infernal userguide and/or [http://en.wikipedia.org/wiki/Stockholm\\_format](http://en.wikipedia.org/wiki/Stockholm_format) for more information. Also, there are a few useful tools for dealing with Stockholm alignments: `sreformat` is useful for converting between different formats. `Ralee` is a handy alignment editor that supports (RNA) Stockholm format. `Infernal` and `HMMer` both accept Stockholm formats for homology search and alignment.

UAAGUUCUCGAUCUCUAAAAUCG #=GC SS\_cons .AAA...<> // A short guide to creating your first Wikipedia article At least one stub article (essentially an extended abstract) for the paper should be added to either an author's userspace at Wikipedia (preferred route) or added directly to the main Wikipedia space (be sure to add literature references to avoid speedy deletion). This article will be reviewed alongside the manuscript and may require revision before acceptance. Upon acceptance, the former articles can easily be exported to the main Wikipedia space. See below for guidelines on how to do this. Existing articles can be updated in accordance with the latest published results. 1. Create an account for yourself at Wikipedia. Go to your favorite Wikipedia article e.g. <http://en.wikipedia.org/wiki/RNA> and click on the "Log in / create account" link at the top of the page; Follow the instructions for creating an account for yourself. 2. Once you have logged in you can go to your userpage by clicking on your username at the top of the page (Paul Gardner's for example takes him to the URL <http://en.wikipedia.org/wiki/User:Ppgardne>). You can personalize this page as you like. To create your stub article, simply add "/name\_of\_RNA\_family" to the URL. For example, if you wanted to create an article about the new eRNA family, you would visit the URL <http://en.wikipedia.org/wiki/User:Ppgardne/eRNA>. Click on the option "Start the User:Ppgardne/eRNA page" and then add the content that you would like to appear in the article to the text box. You can view previews of the article as you work; do not forget to push save once you are happy with the article. An excellent option for inexperienced users is to write a draft of the article using OpenOffice (version 2.3 or greater). OpenOffice can export content directly in WikiMedia format! Keep in mind that Wikipedia articles are to be targeted at a level that an undergraduate could comprehend. Try to avoid jargon and do provide links to other Wikipedia articles at the first use of specific terms, e.g. [[RNA]]. Also the title of the page should appear in bold at the first use of the text of the article, e.g. "eRNA." 3. References can be generated in Wikipedia format using the template filler tool. Add these at end of relevant sentences within the text after punctuation points. 4. To get a nicely formatted reference list at the

bottom of the page just add the following two lines: `==References== {{reflist|2}}`

For more help see: [http://en.wikipedia.org/wiki/Help:Starting\\_a\\_new\\_page](http://en.wikipedia.org/wiki/Help:Starting_a_new_page) Take note to ensure that any uploaded figures conform to Wikipedia's image use policy ([http://en.wikipedia.org/wiki/Wikipedia:Image\\_use\\_policy](http://en.wikipedia.org/wiki/Wikipedia:Image_use_policy)) An example of a good RNA page is the hammerhead ribozyme article Minimal requirements for siRNA experiments. Use at least two—ideally three—independent siRNAs with a reproducible phenotype in your RNA interference experiments. Convolved pools of siRNAs or single siRNAs / shRNAs are unacceptable. The negative control should be a scrambled or non-targeting siRNA / shRNA sequence, not an empty vector or untreated cells. Availability of materials and data It is expected that authors should be able to provide any materials and/or protocols used in published experiments to other qualified researchers for their own use. Materials include (but are not limited to): cells DNA, antibodies, reagents, organisms, mouse strains, and Drosophila strains. These should be made available in a timely manner and it is acceptable to request reasonable payment to cover the cost of maintenance and transport. For materials such as mutant strains and cell lines, authors should use established public repositories and provide relevant accession numbers wherever possible. Repositories include: · Jackson Laboratory (mouse strains) · Bloomington Drosophila Stock Center at Indiana University (fly strains) · Drosophila Genomics Resource Center (DNA clones and cell lines) · MMRRC (Mutant Mouse Regional Resource Centers) · UK Stem Cell Bank Papers reporting protein or DNA sequences and molecular structures should provide an accession number to any of the three major collaborative databases: DDBJ, EMBL or GenBank. It is only necessary to submit to one database as data are exchanged between DDBJ, EMBL and GenBank on a daily basis. The suggested wording for referring to accession-number information is: "These sequence data have been submitted to the DDBJ/EMBL/GenBank databases under accession number U12345."

## References

Please use this [reference guide](#) when preparing your paper.

An [EndNote output style](#) is also available to assist you.

## Taylor & Francis Editing Services

To help you improve your manuscript and prepare it for submission, Taylor & Francis provides a range of editing services. Choose from options such as English Language Editing, which will ensure that your article is free of spelling and grammar errors, Translation, and Artwork Preparation. For more information, including pricing, [visit this website](#).

### Checklist: What to Include

1. **Author details.** Please ensure everyone meeting the International Committee of Medical Journal Editors (ICMJE) [requirements for authorship](#) is included as an author of your paper. All authors of a manuscript should include their full name and affiliation on the cover page of the manuscript. Where available, please also include ORCIDiDs and social media handles (Facebook, Twitter or LinkedIn). One author will need to be identified as the corresponding author, with their email address normally displayed in the article PDF (depending on the journal) and the online article. Authors' affiliations are the affiliations where the research was conducted. If any of the named co-authors moves affiliation during the peer-review process, the new affiliation can be given as a footnote. Please note that no changes to affiliation can be made after your paper is accepted. [Read more on authorship](#).
2. **Graphical abstract** (optional). This is an image to give readers a clear idea of the content of your article. It should be a maximum width of 525 pixels. If your image is narrower than 525 pixels, please place it on a white background 525 pixels wide to ensure the dimensions are maintained. Save the graphical abstract as a .jpg, .png, or .gif. Please do not embed it in the manuscript file but save it as a separate file, labelled GraphicalAbstract1.
3. You can opt to include a **video abstract** with your article. [Find out how these can help your work reach a wider audience, and what to think about when filming](#).

4. **Funding details.** Please supply all details required by your funding and grant-awarding bodies as follows:  
  
▼  
*For single agency grants*  
This work was supported by the [Funding Agency] under Grant [number xxxx].  
*For multiple agency grants*  
This work was supported by the [Funding Agency #1] under Grant [number xxxx]; [Funding Agency #2] under Grant [number xxxx]; and [Funding Agency #3] under Grant [number xxxx].
5. **Disclosure statement.** This is to acknowledge any financial interest or benefit that has arisen from the direct applications of your research. [Further guidance on what is a conflict of interest and how to disclose it.](#)
6. **Data availability statement.** If there is a data set associated with the paper, please provide information about where the data supporting the results or analyses presented in the paper can be found. Where applicable, this should include the hyperlink, DOI or other persistent identifier associated with the data set(s). [Templates](#) are also available to support authors.
7. **Data deposition.** If you choose to share or make the data underlying the study open, please deposit your data in a [recognized data repository](#) prior to or at the time of submission. You will be asked to provide the DOI, pre-reserved DOI, or other persistent identifier for the data set.
8. **Geolocation information.** Submitting a geolocation information section, as a separate paragraph before your acknowledgements, means we can index your paper's study area accurately in JournalMap's geographic literature database and make your article more discoverable to others. [More information.](#)
9. **Supplemental online material.** Supplemental material can be a video, dataset, fileset, sound file or anything which supports (and is pertinent to) your paper. We publish supplemental material online via Figshare. Find out more about [supplemental material and how to submit it with your article.](#)
10. **Figures.** Figures should be high quality (1200 dpi for line art, 600 dpi for grayscale and 300 dpi for colour, at the correct size). Figures should be supplied in one of our preferred file formats: EPS, PS, JPEG, GIF, or Microsoft Word (DOC or DOCX). For information relating to other file types, please consult our [Submission of electronic artwork](#) document.

11. **Tables.** Tables should present new information rather than duplicating what is in the text. Readers should be able to interpret the table without reference to the text. Please supply editable files.
12. **Equations.** If you are submitting your manuscript as a Word document, please ensure that equations are editable. More information about [mathematical symbols and equations](#).
13. **Units.** Please use [SI units](#) (non-italicized).

## Using Third-Party Material in your Paper

You must obtain the necessary permission to reuse third-party material in your article. The use of short extracts of text and some other types of material is usually permitted, on a limited basis, for the purposes of criticism and review without securing formal permission. If you wish to include any material in your paper for which you do not hold copyright, and which is not covered by this informal agreement, you will need to obtain written permission from the copyright owner prior to submission. More information on [requesting permission to reproduce work\(s\) under copyright](#).

## Disclosure Statement

Please include a disclosure statement, using the subheading “Disclosure of interest.” If you have no interests to declare, please state this (suggested wording: *The authors report no conflict of interest*). For all NIH/Wellcome-funded papers, the grant number(s) must be included in the declaration of interest statement. [Read more on declaring conflicts of interest](#).

## Clinical Trials Registry

In order to be published in a Taylor & Francis journal, all clinical trials must have been registered in a public repository at the beginning of the research process (prior to patient enrolment). Trial registration numbers should be included in the abstract, with full details in the methods section. The registry should be publicly accessible (at no charge), open to all prospective registrants, and managed by a

not-for-profit organization. For a list of registries that meet these requirements, please visit the [WHO International Clinical Trials Registry Platform \(ICTRP\)](#). The registration of all clinical trials facilitates the sharing of information among clinicians, researchers, and patients, enhances public confidence in research, and is in accordance with the [ICMJE guidelines](#).

## Complying With Ethics of Experimentation

Please ensure that all research reported in submitted papers has been conducted in an ethical and responsible manner, and is in full compliance with all relevant codes of experimentation and legislation. All papers which report in vivo experiments or clinical trials on humans or animals must include a written statement in the Methods section. This should explain that all work was conducted with the formal approval of the local human subject or animal care committees (institutional and national), and that clinical trials have been registered as legislation requires. Authors who do not have formal ethics review committees should include a statement that their study follows the principles of the [Declaration of Helsinki](#).

## Consent

All authors are required to follow the [ICMJE requirements](#) on privacy and informed consent from patients and study participants. Please confirm that any patient, service user, or participant (or that person's parent or legal guardian) in any research, experiment, or clinical trial described in your paper has given written consent to the inclusion of material pertaining to themselves, that they acknowledge that they cannot be identified via the paper; and that you have fully anonymized them. Where someone is deceased, please ensure you have written consent from the family or estate. Authors may use this [Patient Consent Form](#), which should be completed, saved, and sent to the journal if requested.

## Health and Safety

Please confirm that all mandatory laboratory health and safety procedures have been complied with in the course of conducting any experimental work reported in your paper. Please ensure your paper contains all appropriate warnings on any hazards that may be involved in carrying out the experiments or procedures you have described, or that may be involved in instructions, materials, or formulae.

Please include all relevant safety precautions; and cite any accepted standard or code of practice. Authors working in animal science may find it useful to consult the [International Association of Veterinary Editors' Consensus Author Guidelines on Animal Ethics and Welfare](#) and [Guidelines for the Treatment of Animals in Behavioural Research and Teaching](#). When a product has not yet been approved by an appropriate regulatory body for the use described in your paper, please specify this, or that the product is still investigational.

## Submitting Your Paper

This journal uses Editorial Manager to manage the peer-review process. If you haven't submitted a paper to this journal before, you will need to create an account in Editorial Manager. Please read the guidelines above and then submit your paper in [the relevant Author Centre](#), where you will find user guides and a helpdesk.

Please note that *RNA Biology* uses [Crossref™](#) to screen papers for unoriginal material. By submitting your paper to *RNA Biology* you are agreeing to originality checks during the peer-review and production processes.

On acceptance, we recommend that you keep a copy of your Accepted Manuscript. Find out more about [sharing your work](#).

## Data Sharing Policy

This journal applies the Taylor & Francis [Basic Data Sharing Policy](#). Authors are encouraged to share or make open the data supporting the results or analyses

presented in their paper where this does not violate the protection of human subjects or other valid privacy or security concerns.

Authors are encouraged to deposit the dataset(s) in a recognized data repository that can mint a persistent digital identifier, preferably a digital object identifier (DOI) and recognizes a long-term preservation plan. If you are uncertain about where to deposit your data, please see [this information](#) regarding repositories.

Authors are further encouraged to [cite any data sets referenced](#) in the article and provide a [Data Availability Statement](#).

At the point of submission, you will be asked if there is a data set associated with the paper. If you reply yes, you will be asked to provide the DOI, pre-registered DOI, hyperlink, or other persistent identifier associated with the data set(s). If you have selected to provide a pre-registered DOI, please be prepared to share the reviewer URL associated with your data deposit, upon request by reviewers.

Where one or multiple data sets are associated with a manuscript, these are not formally peer reviewed as a part of the journal submission process. It is the author's responsibility to ensure the soundness of data. Any errors in the data rest solely with the producers of the data set(s).

## **Publication Charges**

There are no submission fees for this journal, but the charges detailed below may be applicable upon acceptance. You can choose to publish your article open access at our Open Select rate of \$2,950. If you choose to publish open access, no additional page or color charges will apply. For all other articles, a page charge of \$125 per page applies to the published typeset pages.

Taylor and Francis operates a waiver policy for low- and lower-middle-income economies which applies to page charges. Corresponding authors with primary affiliations based in countries defined by the World Bank as 'Low-Income

Economies' are entitled to apply for a 100% page charge waiver and corresponding authors with primary affiliations based in countries defined by the World Bank as 'Lower-Middle-Income Economies' are entitled to apply for a 50% discount on the normal page charge. If you think you may be eligible for a page charge discount or waiver, please check that your country is one of those defined by the World Bank as being low-income or lower-middle-income. Submit through the journal's online submission system in the usual way, following the Instructions for Authors. During the process of submitting your manuscript online you will be asked whether you wish to request a discount or waiver. Please select the appropriate option at this stage.

Please note that discount and waiver requests must be made when you first submit your manuscript. It will not normally be possible to process requests made on any subsequent revisions.

Color figures will be reproduced in color in your online article free of charge. If it is necessary for the figures to be reproduced in color in the print version, a charge will apply. Charges for color figures in print are \$225 per figure for the first four figures and figures five and above will be charged at \$80 per figure. Depending on your location, these charges may be subject to local taxes. There is no fee for hosting online supplemental material. per printed page.

Colour figures will be reproduced in colour in your online article free of charge.

## Copyright Options

Copyright allows you to protect your original material, and stop others from using your work without your permission. Taylor & Francis offers a number of different license and reuse options, including Creative Commons licenses when publishing open access. [Read more on publishing agreements.](#)

## Complying with Funding Agencies

We will deposit all National Institutes of Health or Wellcome Trust-funded papers into PubMedCentral on behalf of authors, meeting the requirements of their

respective open access policies. If this applies to you, please tell our production team when you receive your article proofs, so we can do this for you. Check funders' open access policy mandates [here](#). Find out more about [sharing your work](#).

## Open Access

This journal gives authors the option to publish open access via our [Open Select publishing program](#), making it free to access online immediately on publication. Many funders mandate publishing your research open access; you can check [open access funder policies and mandates here](#).

Taylor & Francis Open Select gives you, your institution or funder the option of paying an article publishing charge (APC) to make an article open access. Please contact [openaccess@tandf.co.uk](mailto:openaccess@tandf.co.uk) if you would like to find out more, or go to our [Author Services website](#).

For more information on license options, embargo periods and APCs for this journal please go [here](#).

## Accepted Manuscripts Online

This journal posts manuscripts online as rapidly as possible, as a PDF of the final, accepted (but unedited and uncorrected) paper. This is clearly identified as an unedited manuscript and is referred to as the Accepted Manuscript Online (AMO). No changes will be made to the content of the original paper for the AMO version but, after copy-editing, typesetting, and review of the resulting proof, the final corrected version (the Version of Record [VoR]), will be published, replacing the AMO version.

The VoR is the article in its final, definitive and citable form (this may not be immediately paginated, but is the version that will appear in an issue of the journal). Both the AMO version and VoR can be cited using the same DOI (digital

object identifier). To ensure rapid publication, we ask you to return your signed publishing agreement as quickly as possible, and return corrections within 48 hours of receiving your proofs.

## My Authored Works

On publication, you will be able to view, download and check your article's metrics (downloads, citations and Altmetric data) via [My Authored Works](#) on Taylor & Francis Online. This is where you can access every article you have published with us, as well as your [free eprints link](#), so you can quickly and easily share your work with friends and colleagues.

We are committed to promoting and increasing the visibility of your article. Here are some tips and ideas on how you can work with us to [promote your research](#).

## Article Reprints

You will be sent a link to order article reprints via your account in our production system. For enquiries about reprints, please contact the Taylor & Francis Author Services team at [reprints@tandf.co.uk](mailto:reprints@tandf.co.uk). You can also [order print copies of the journal issue in which your article appears](#).

## Queries

Should you have any queries, please visit our [Author Services website](#) or contact us [here](#).
